NULLCLASS

"Get Real World Experience" We enable the students to gain real education. We help students to get real industry experience by providing them with real time projects. We bridge the gap between knowledge and application.

In today's fast-changing world, where AI and automation are reshaping industries overnight, having real-world experience and certification is no longer optional—it's essential. Companies prioritize *skills over degrees, and layoffs can happen in an instant. The question is: Are you prepared?*

Why Join Our Real-Time Project & Internship Program?

» Minimal fee, Maximum Returns – For just a small fee, you gain access to valuable industry experience, expert mentorship, and a recognized certification that can boost your career.

» Gain Hands-On Experience – Work on live industry projects, not just classroom simulations, so you're job-ready from day one.

» Certification That Matters – Stand out in job applications with an industry-approved certification that showcases your expertise.

» Enhance Your Employability – Companies prefer candidates who have practical exposure.

» Future Career Opportunities– Completing this internship opens doors to better job prospects.

TRAINING DETAILS

- Initially the candidate needs to complete the training session of 15 hours in any one of our projects -Hack Operating System, Hack Web Applications,Hack Android OS.

- During the training session the candidate will learn how to build real time applications from scratch with the help of our expert mentors. If the candidate does not have any prior knowledge there will be no problem.

- The candidate will be able to access Pre recorded videos, Source code, study materials from our website once they complete the process from our website.

- The candidate will be added to our premium whatsapp group for 24/7 one to one mentor support in which the doubts will be cleared instantly within a minute. If the candidate will getany critical errors they can connect on a live session with the mentor.

- There are no time restrictions to complete the training session of 15 hours as it is lifetime accessible, so candidates can complete as per their time preference.

- The candidate will receive the authorized experience certificate once they complete their training session of 15 hours.

- There will be the percentage option on our website once you proceed with the training session further the percentage will increase. "Once it will be 100% completed and along with completion of training project following the lectures it will be considered as the training period has been finished"

INTERNSHIP DETAILS

- During the internship the candidate will be supposed to work on the real time projects, security on the web application and operating system..

- There will be flexible working hours that are 3 hours on a daily basis and five days in a week. The candidate may select the working hours according to their time schedule; there is no restriction on that.

- The stipend will be ₹3000 fixed. However it will be increased if the candidate will select more than one project.

- The duration of the internship will be up to 6 months depending upon the candidate choice (minimum 1 month and maximum 6 months).

- The candidate will get the authorized certificate for the internship & they will get a letter of recommendation.

- As the actual fee for the project on our website is ₹997/- But only for the shortlisted candidates and for limited period of time it will be ₹497/-.

BELOW ARE THE DETAILS FOR THE PROJECTS AND THEIR CONTENTS.

HACK OPERATING SYSTEM

- **System Security Mastery:** Delve into the architecture of Windows and Linux operating systems to understand and secure their core components against real-time threats.

- **Ethical Hacking Techniques:** Equip yourself with ethical hacking skills specific to operating systems, learning to detect, exploit, and patch vulnerabilities.

- **Incident Response and Mitigation:** Gain critical skills in incident response, learning to quickly and effectively mitigate threats to operating systems in real-world situations.

HACK WEB APPLICATIONS

- **Web Security Proficiency:** Understand and apply the principles of web security to identify vulnerabilities within real-time web applications. Learn to think like an attacker to better defend against them.

- **Hands-On Vulnerability Assessment:** Develop proficiency in conducting thorough vulnerability assessments of web applications, using the same tools and techniques used by professionals in the field.

- **Advanced Defense Tactics:** Master advanced web defense tactics by engaging with real-time scenarios, including SQL injection, XSS, CSRF, and more, preparing you to respond to incidents with confidence.

HACK ANDROID OS

- Learn about the architecture of Android operating systems to grasp how they function and where vulnerabilities may lie.

- Identify common security threats that target Android devices to understand the risks users face.

- Evaluate tools for Android malware analysis and detection to choose appropriate solutions for threat mitigation.

- Deploying Mobile Device Management and Device Security Assessment.

- Install and utilize Termux on Android devices to explore reverse engineering capabilities and assess its potential in mitigating security risks across Android versions.

- Understand how Android devices can be exploited in different ways through Capture the Flag.need course tagline, description, overview, features and benefits from the above.

REAL TIME SECURITY OPERATIONS CENTER (SOC) PROJECT

- A deep understanding of SOC functions, team structures, and operational workflows.

- Knowledge of how SIEM solutions contribute to enterprise security monitoring.

- Awareness of threat intelligence and how organizations use it to anticipate and mitigate cyber threats.

- A structured approach to incident response, including preparation, identification, containment, eradication, and recovery.

- An understanding of SOC workflow, regulatory compliance, and reporting for maintaining security standards.
